

1.Power supply

2.Start

1. Firstly, if we burn our USB drive image, we can directly plug the USB drive into the Jetson Nano B01 SUB SUB motherboard to enter the system normally. We can also connect the Jetson Nano B01 SUB to the monitor, DC power supply, mouse, and keyboard through HDMI.
2. Secondly, if the burned SD card image wants to be started using a USB drive, it needs to be connected to the SD card reader, and then modify the startup method according to the above 4. Programming U disk system. Then, the reader with the SD card inserted can be used as a USB drive to connect to the Jetson Nano B01 SUB, and the Jetson Nano can also be connected to the monitor, DC power supply (jumper cap short circuited to J48), mouse, and keyboard through HDMI.
