

Model Conversion

Model Conversion

1. Jetson Nano YOLO26 (Benchmark)
2. Model Conversion
 - 2.1. CLI: pt → onnx

1. Jetson Nano YOLO26 (Benchmark)

The Ultralytics team has not officially provided benchmarks based on Jetson Nano. Therefore, there is no comparison chart here.

Official benchmark display page: [Quick Start Guide: NVIDIA Jetson with Ultralytics YOLO26](#)

2. Model Conversion

The first time you use YOLO26's export mode, it will automatically install some dependencies. Just wait for it to complete automatically!

2.1. CLI: pt → onnx

Convert PyTorch format model to onnx

```
cd /ultralytics
```

```
yolo export model=yolo26n.pt format=onnx
# yolo export model=yolo26n-seg.pt format=onnx
# yolo export model=yolo26n-pose.pt format=onnx
# yolo export model=yolo26n-cls.pt format=onnx
# yolo export model=yolo26n-obbb.pt format=onnx
```

```

Installing collected packages: humanfriendly, coloredlogs, onnxruntime
Successfully installed coloredlogs-15.0.1 humanfriendly-10.0 onnxruntime-1.19.2
WARNING: Running pip as the 'root' user can result in broken permissions and conflicting behaviour with the sys
tem package manager, possibly rendering your system unusable. It is recommended to use a virtual environment in
stead: https://pip.pypa.io/warnings/venv. Use the --root-user-action option if you know what you are doing and
want to suppress this warning.
